Notice : If you want, you can add new glow color set or change glow colors in ActionScript code. Double click and enter the "glow_fader_main_mc". Select actionScript layer. Open ActionScript panel and find color hex code lines.

The screenshot shows the Macromedia Flash Professional 8 interface. The main workspace displays a black background with the text "Hello World! This is Sample Text." The word "This" is highlighted with a glow effect. The ActionScript panel is open, showing the following code:

```
var glow_distance:Number = 0;
var glow_angleInDegrees:Number = 45;
if (glow_color == "gold") {
    var glow_colors:Array = [0x990000, 0xFF6600, 0xFFFF00, 0xFFFFCC];
}
if (glow_color == "blue") {
    var glow_colors:Array = [0x003399, 0x003399, 0x0099FF, 0x99CCFF];
}
if (glow_color == "green") {
    var glow_colors:Array = [0x006600, 0x339900, 0x99FF00, 0xFFFFCC];
}
```

The code is highlighted with a red box. The interface also shows the timeline, tools, and properties panels.

NON XML USAGE

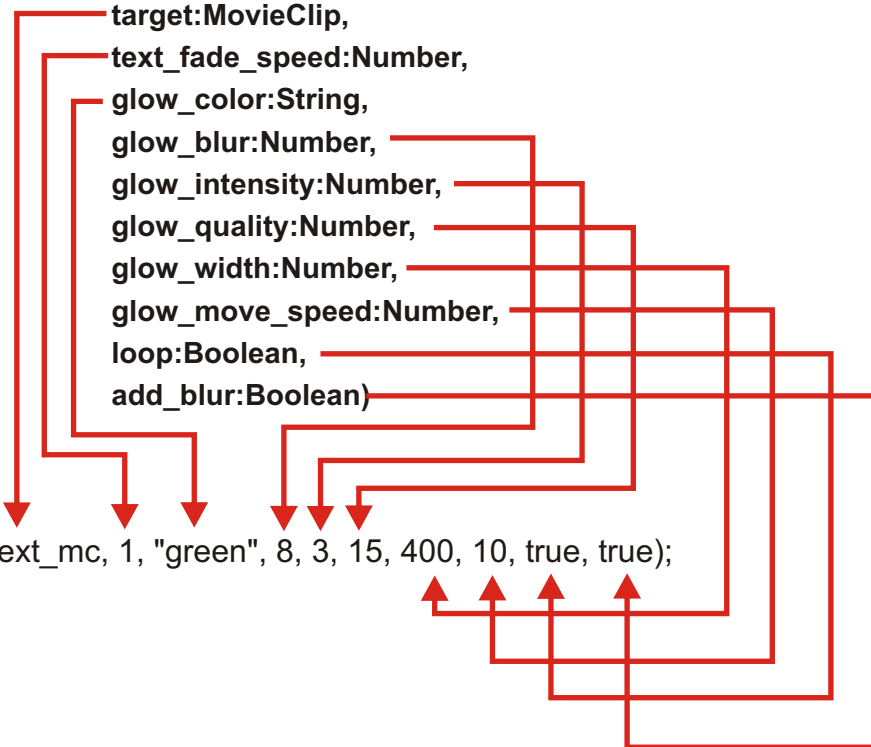

If you want, you can use glow text rotator non XML version. You can access all parameters via a function command in ActionScript. Please open "[glow_text_rotator_non_xml.fla](#)" for non XML usage.

Usage :

```
glow_fader ( target:MovieClip,  
             text_fade_speed:Number,  
             glow_color:String,  
             glow_blur:Number,  
             glow_intensity:Number,  
             glow_quality:Number,  
             glow_width:Number,  
             glow_move_speed:Number,  
             loop:Boolean,  
             add_blur:Boolean)
```

Example :

```
glow_fader(text_mc, 1, "green", 8, 3, 15, 400, 10, true, true);
```

Notice : Please look at tutorial movies for seeing action.
